

Working with Pie Charts

In this tutorial, we will show you how to work with pie charts. We will be using this project [http://isenseproject.org/projects/185/data_sets/] as a sample project, so feel free to click the link and follow along.

Introduction

Let's take a look at the "Pie" tab. This view shows you what percentages of the total each group takes up. For example, here we have a view of what browser most people use to access the Internet.

Customizations

If you have more than one group, like we do, they will all show up in the picture. Click on "Groups" to choose which ones to hide or to change the color of any item.

Tools

This view is based on the average number of users of each program per year. Under "Tools" we can choose to sort based on just the years with the minimum or maximum amounts of users.
